Noordwijk, March 22- 23, 2011

The InDesA Virtual Test Facility Environment

Dr. Gerald Seider
Dr. Fabiano Bet

Company Profile

INTEGRATED
DESIGN
ANALYSIS
GmbH **InDesA**

Consulting- &
Engineering Services

Simulation and Analysis
of complex fluid flow and heat
transfer systems
for engineering and industrial
applications

- **Vehicle Thermal Management**
- **Engine Thermal Management**
- **Electronics & Battery Thermal Management**
- **Heat Exchanger Thermal Analysis**
- **Turbomachinery Flow and Thermal Analysis**
and more ...

3D CFD/CHT Analysis

1D System Analysis

GT-SUITE

InDesA Virtual Test Facility Center

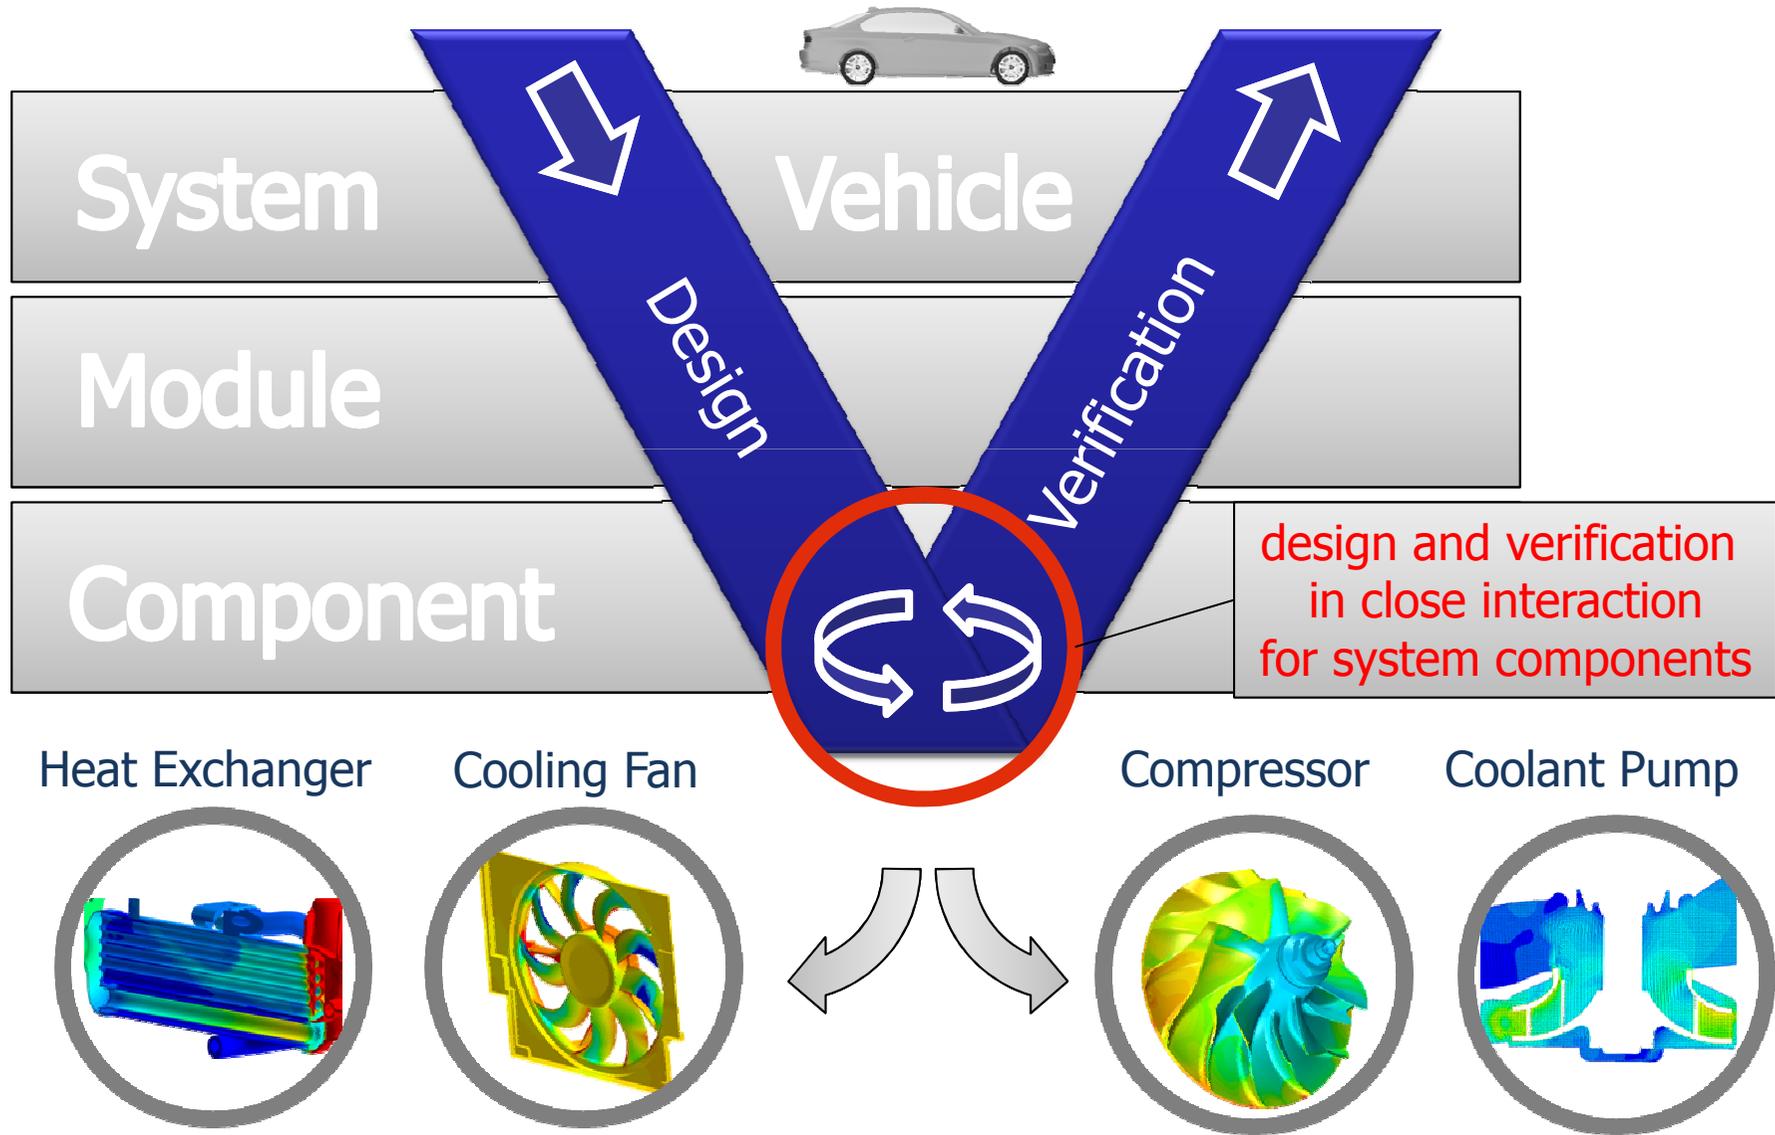

Overview

The Indesa Virtual Test Facility Center

- 1. Background and Motivation**
- 2. Concept and Architecture**
- 3. Example: Test Rig for an EGR Cooler Module**
- 4. Example: An Innovative Generator/Water Pump Unit**
- 5. Combined Applications**
- 6. Conclusion**

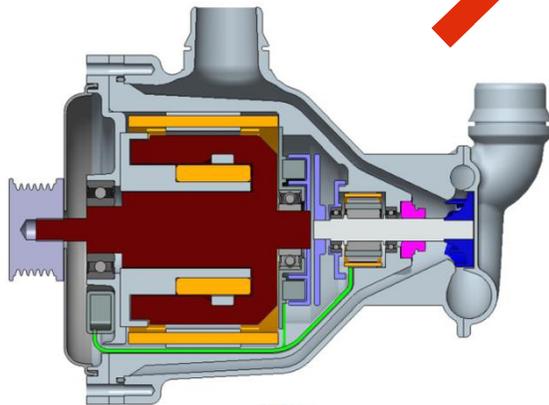

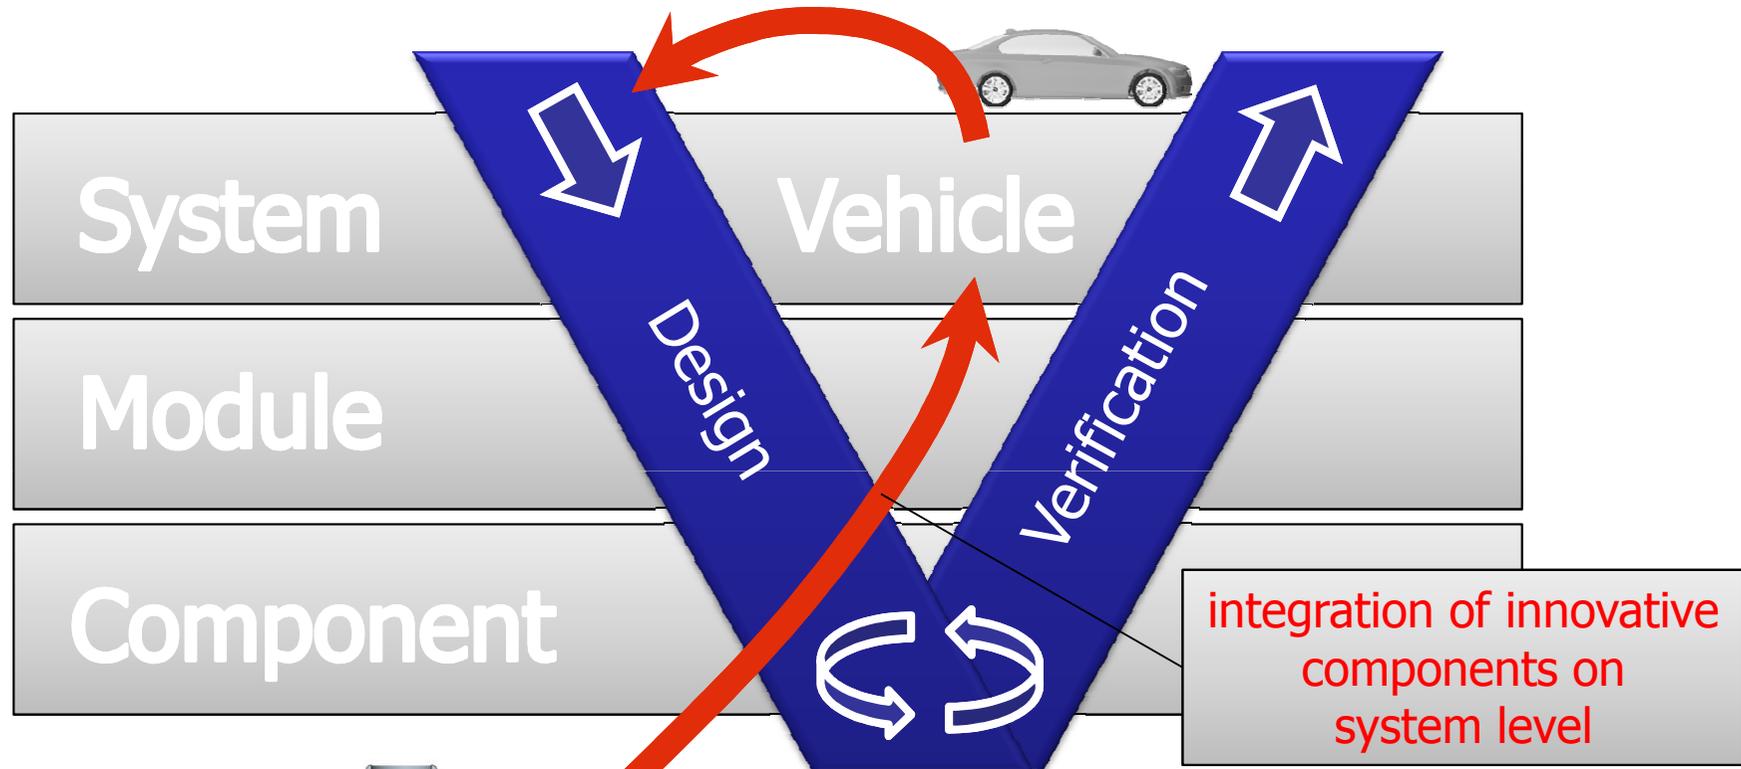

InDesA Virtual Test Facility Center

The OEM's V-Type Development Process

InDesA Virtual Test Facility Center

The OEM's V-Type Development Process

Innovative Accessory Units

like the
alternator with integrated coolant pump
must be integrated on the system level

InDesA Virtual Test Facility Center

Motivation

The V-Development Process ...

- leaves hardly time for prototype testing of system components
- requires fast adaption of components to changing module and system requirements

or simply ...

the V-Development Process requires more
Virtual Testing on component level

InDesA Virtual Test Facility Center

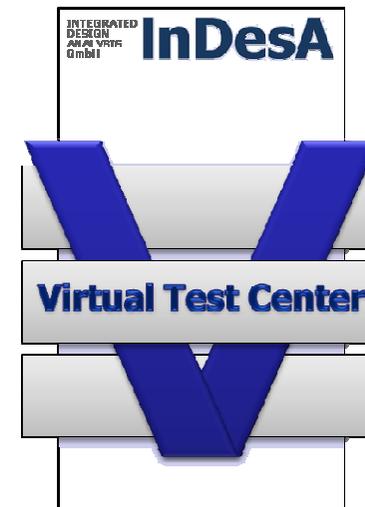

Motivation

We identified a need for ...

**a highly optimized virtual test environment,
that is fast, flexible and cost efficient**

**for performance prediction (maps) of
standard automotive accessory units**
(fans, pumps, compressors, heat exchanger)

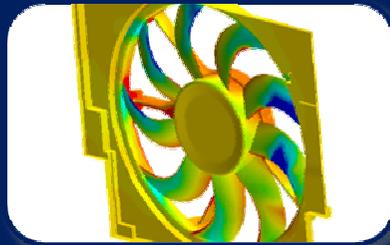

**for functional testing & confirmation of
engine and vehicle thermal systems**
(coolant circuit, heat exchanger packs,
electronics cooling, battery packs)

⇒ Design of the InDesA virtual test facility environment

InDesA Virtual Test Facility Center Concept

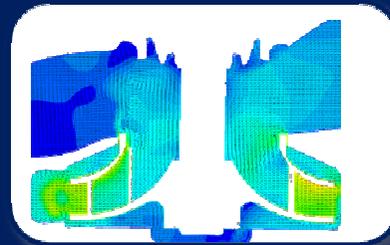

Cooling Fan

GT-SUITE

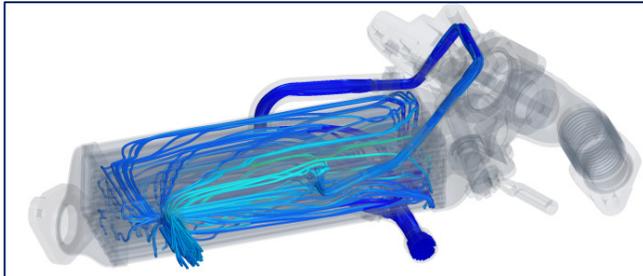

InDesA Virtual Test Facility Center

Test Rig Set-Up for an EGR Cooler Module

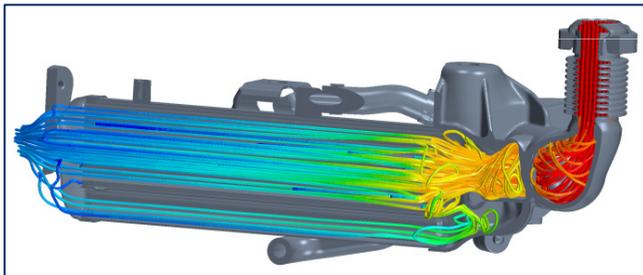

InDesA Virtual Test Facility Center

Test Rig Results for an EGR Cooler

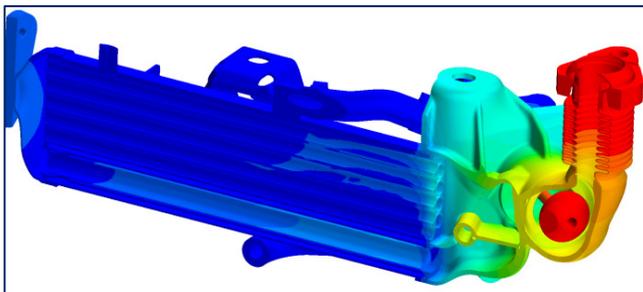

Coolant

- temperatures
- pressure loss
- onset of boiling
- volume flow rates
- flow uniformity

Exhaust

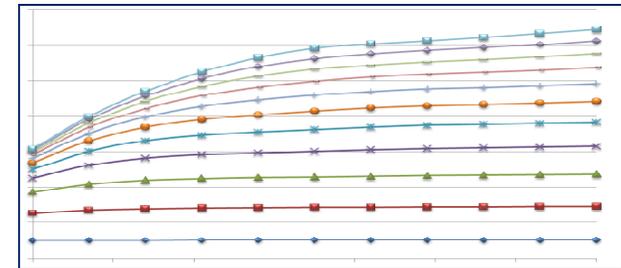

- outlet temperature
- pressure loss
- force on flap
- flow leakage

Structure

- temperatures
esp. valve seat
- heat transfer

Heat Transfer Map

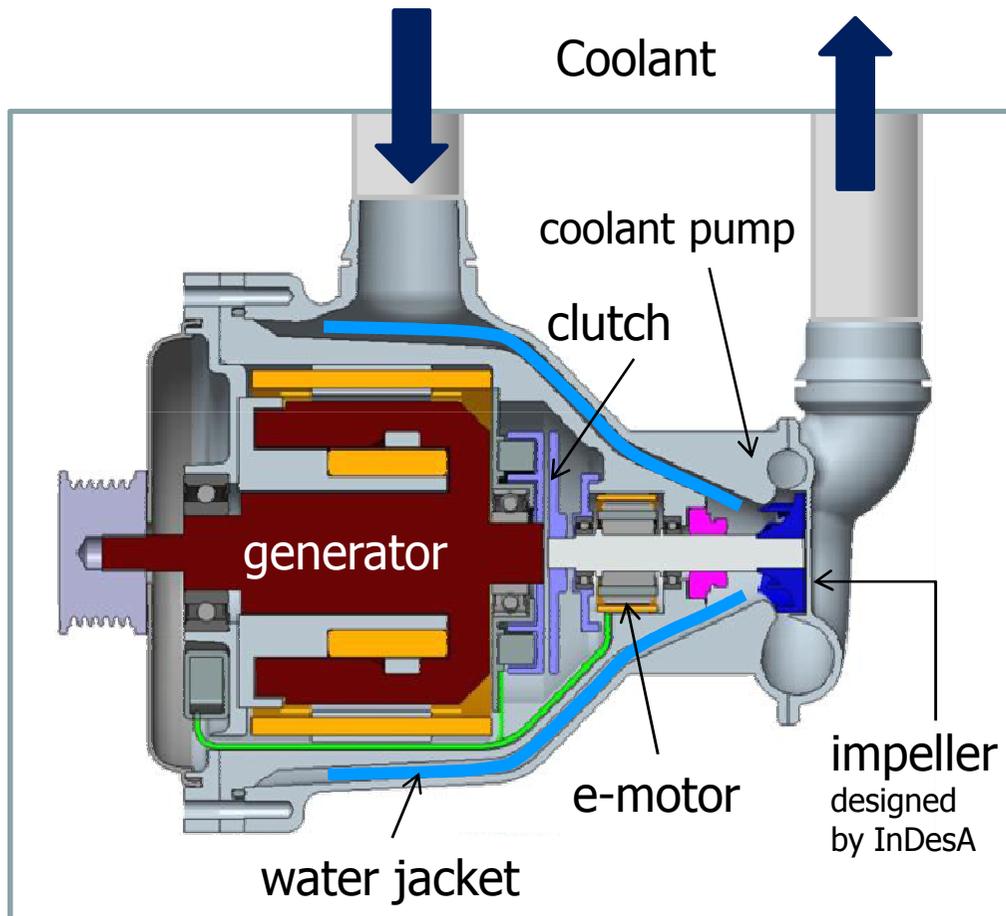

Nusselt Correlation

$$Nu = f(Re, Pr)$$

InDesA Virtual Test Facility Center

Innovative Coolant Pump/Generator Unit

Fluid mechanical design goals:

- verification of generator cooling
 - target pump performance
 - target pump efficiency
- ⇒ low pressure loss in waterjacket
- ⇒ design of efficient high speed impeller

Challenge:

Concept must be adapted and integrated for different vehicles on system level.

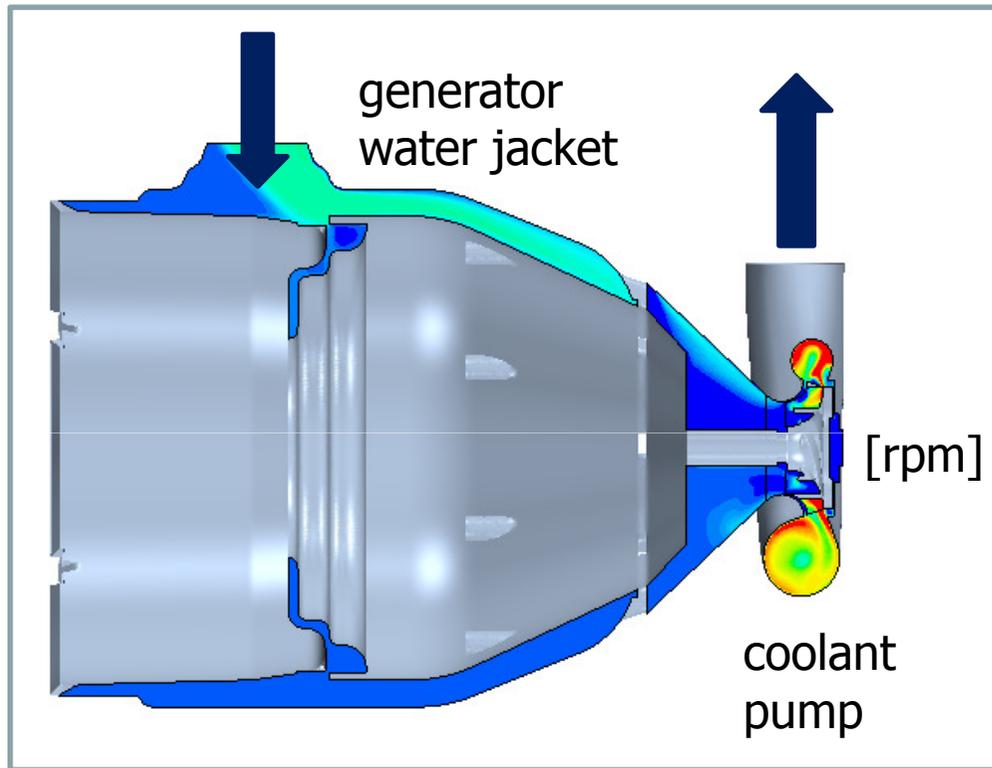

⇒ Need of a fast and efficient virtual process with direct interaction of design and verification.

Generator/Pump design by IGEL AG;

Winning "Award of Innovation" granted by the "Würzburger Automobil Gipfel 2010"

InDesA Virtual Test Facility Center

Results for Coolant Pump/Generator Concept

Coolant Pump

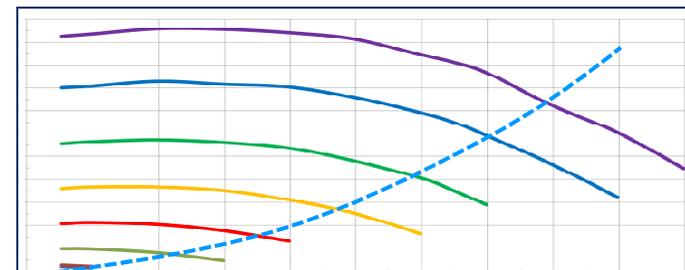

- volume flow rate for different impeller speeds
- pressure rise of pump
- hydraulic efficiency of pump
- onset of cavitation

Generator Waterjacket

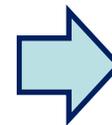

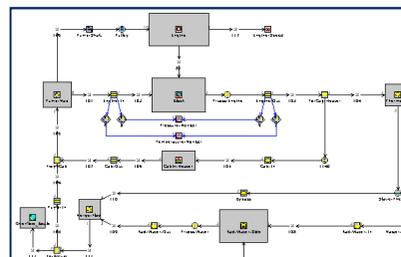

- pressure loss of waterjacket
- heat transfer coefficients

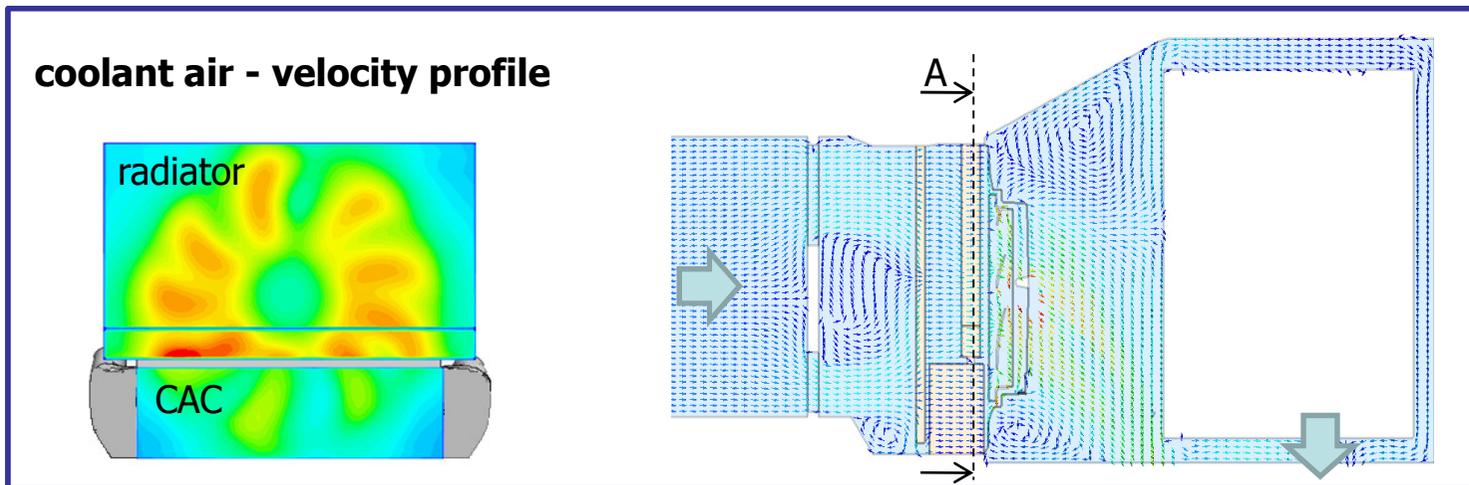

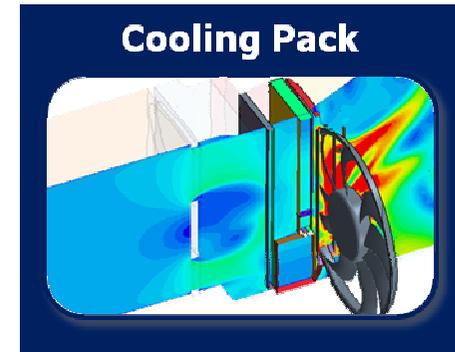

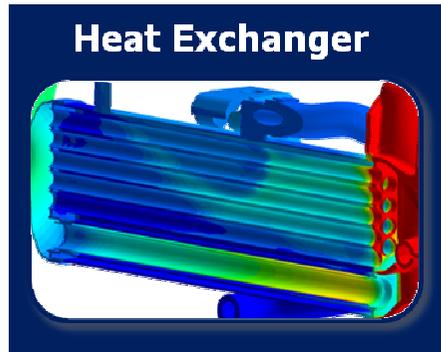

Pump Performance Map (affinity laws)

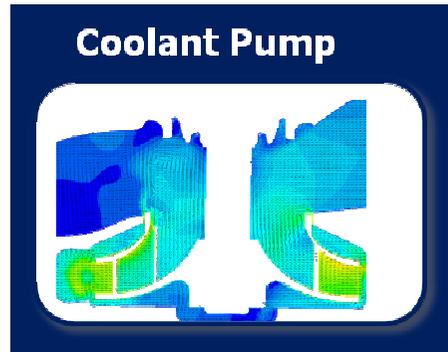

System Pressure Loss
optional from
GT-SUITE
coolant system model

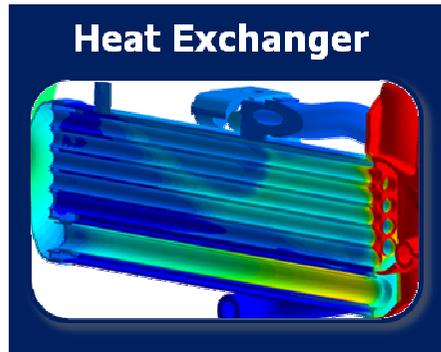

InDesA Virtual Test Facility Center Combination for Cooling Package

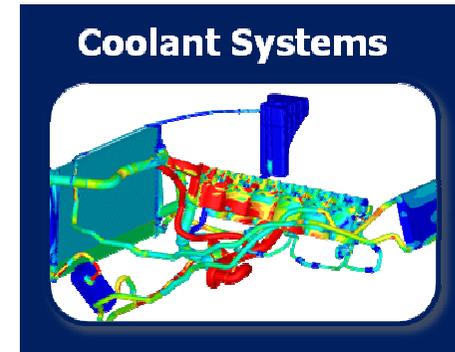

InDesA Virtual Test Facility Center Combination for Coolant System

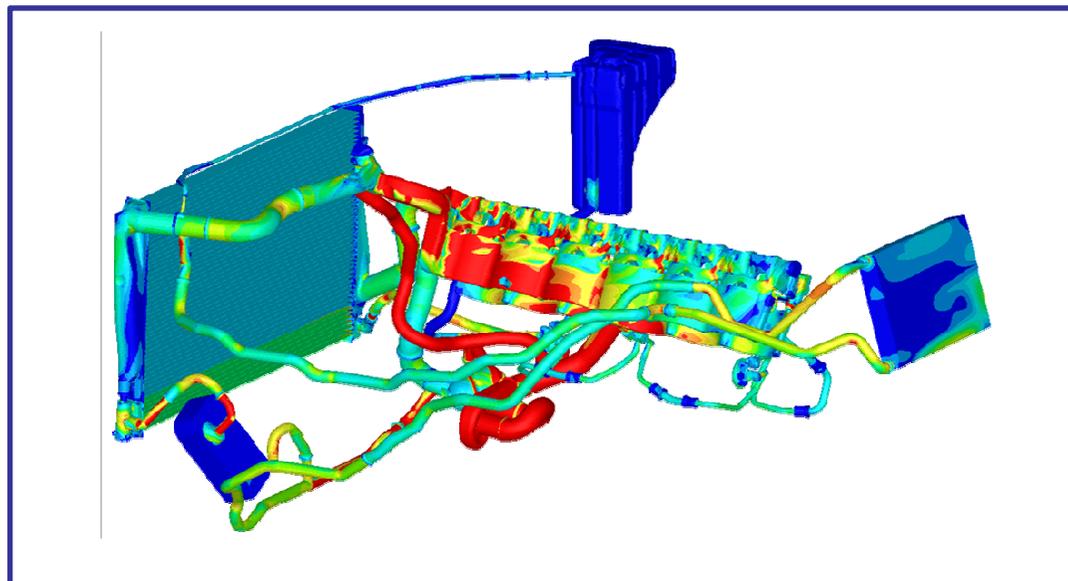

3D CFD model

3D CFD model
of coolant side

3D CFD model for coolant
system

→ Analysis of flow rates in entire coolant system for different pump speeds and thermostat /valve settings.

→ Investigation of system filling procedure and de-gas behavior

InDesA Virtual Test Facility Center

Conclusion I

The InDesA Virtual Test Facility Center

... an Efficient and Environment-Friendly Concept.

standardized and customized procedures for virtual test rig set-up and post-processing.

over 100 processors linked with a high performance communication and storage system tuned for optimal performance of StarCCM+

**decent energy consumption -
only ventilation; no air conditioning of compute cluster;
no energy needed to feed heat exchangers for performance tests.**

InDesA Virtual Test Facility Center

Conclusion II

The IndesA Virtual Test Facility Center

... High Fidelity, Repeatability and Comparability

High resolution CFD models ensure detailed capturing of geometry
(allows for capturing of flow leakage in pumps, hinges, etc.)

Use of advanced StarCCM+ physical model library
(radiation, two-phase for boiling, kinematic module for pressure actuated flaps, etc.)

CFD model of test rig and test object are packed and stored with all results for reuse.

(allows to run additional operating points at request anytime; also used for documentation of test cases)

Comparability of results for different prototype stages
(same boundary conditions, same solution method, same mesh resolution)

InDesA Virtual Test Facility Center

Conclusion III

The IndesA Virtual Test Facility Center

... 3D CFD/CHT and More!

CFD/CHT analysis can be extended to stress /strain analysis
(indication for possible fatigue problems)

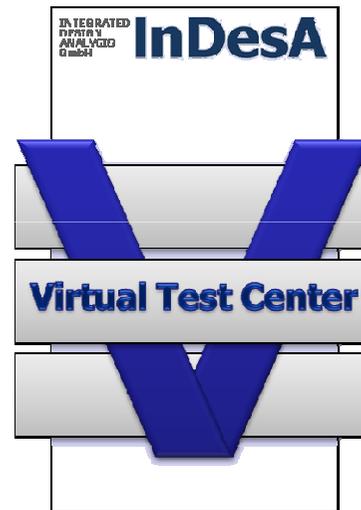

Sophisticated boundary conditions can be added by 1D system analysis
(GT-POWER engine model, GT-SUITE coolant circuit, etc.)

Extended POST-Processing and results analysis
(Derivation of general Nu-Correlation for heat exchangers)

Combination of test rig models can be used to investigate larger systems
(underhood flow, coolant systems)
